PERSONAL STATEMENT

Working with web development since 2023, I have developed projects and support which impact 50,000+ users around my city. I'm always concerned about the project architecture and UI of the projects where I work.

WORK EXPERIENCE

Junior FullStack Developer
At Cast Group
May. 2023 - Present

In this position, I work as an outsourced employee for another company called AGETEC, performing the role of a full-stack developer. I am responsible for maintaining various legacy projects and also for creating new projects.

- I have collaborated closely with the product team and stakeholders, contributing to the development of new features and addressing bugs in projects that boast over 50,000 active users.
- I also proposed to the company the migration of a project from Java 6 and Jersey to an MVC architecture using the Spring Boot framework. I assumed responsibility for overseeing the migration, collaborating with another junior developer.
- I also worked on projects using PHP and Laravel, integrating internal APIs to build a management interface for a project called "Panic Button." This project was implemented for public school teachers so that in emergency situations at schools, they can quickly request assistance.

IT Support Analyst N2
At Sistema Locar
Jun. 2022 - Apr. 2023

I worked assisting users of our system with day-to-day issues, addressing inquiries, and providing remote access to resolve any setbacks. Additionally, I am involved in sales, presenting the system to new clients, maintenance, and training. I have learned the ins and outs of the entire process, from customer contact to implementation and maintenance. I also assist with certain issues in the POSTGRESQL database and handle programming customizations in Delphi 7, the platform on which the system was originally developed.

EDUCATION

Bachelor of Computer Science
UNIDERP
Jan. 2022 - Dec. 2025
